<td>For the second step of the designation procedure of the Guidelines (supervisory judgment), the ACPR has selected two additional optional indicators from Annex 2:</td>

</tr>
<tr>
<td></td>
<td>For both indicators, ACPR has decided to use a threshold of 3.5% (350 basis points over 10 000).</td>
</tr>
<tr>
<td></td>
<td>For the first of these two additional indicators, only one additional credit institution presents a significant share: <strong>La Banque Postale</strong> (LBP). Indeed, apart from the five O-SIIs automatically designated, LBP, with a share of 4.9%, stands out clearly above the threshold.</td>

4.4 Calibrating the O-SII buffer

Compared to last year calibration, the ACPR adjusted its methodology in order to use a bucketing approach, like for the calibration of G-SII buffers.

Bucket thresholds have been defined based on the final O-SII score:

- from 0 to 500 bp: 0.25% CET1
- from 500 to 1 000 bp: 0.5% CET1
- from 1 000 to 2 000 bp: 1% CET1
- from 2 000 to 3 000 bp: 1.5% CET1
- larger than 3 000 bp: 2% CET1

As a result, the fully phased-in O-SII buffers to be implemented by 1st January 2019 are the following:

- BNPP: 1.5%
- SG: 1%
- GCA: 1%
- GBPCE: 1%
- GCM: 0.5%
- LBP: 0.25%

4.5 Effectiveness and proportionality of measure

Concerning the implementation of O-SII buffers in France, the effect should be mild for the following reasons:

- Four out of the 6 O-SIIs already have a G-SII phased-in buffer and have already taken into account this requirement for their capital planning;
- For the additional two O-SIIs, the envisaged phase in for the O-SII buffer enables capital planning.

5. Cross-border and cross-sector impact of the measure

5.1 Assessment of cross-border effects and the likely impact on the internal market (Recommendation ESRB/2015/2)

No comment.
### 5.2 Assessment of leakages and regulatory arbitrage within the notifying Member State

No comment.

### 6. Combinations and interactions with other measures

#### 6.1 Combinations between G-SII and O-SII buffers (Article 131.14)

Four out of the six French O-SIIs are G-SIIs: BNPP, GCA, SG and GBPCE.

For three of them, SG, GCA and GBPCE, the fully phased-in O-SII buffer equals the fully phased-in G-SII buffer of 1% (with same phase in timing).

For BNPP, the current fully phased-in G-SII buffer is 2%, while the fully phased-in O-SII buffer is 1.5%.

#### 6.2 Combinations with SRB buffers (Article 131.14 + Article 133.5)

No SRB buffer is applied.

#### 6.3 O-SII requirement for a subsidiary (Article 131.8)

Not the case.

#### 6.4 Interaction with other measures

No other interaction.
