

## Notification template for Article 131 of the Capital Requirements Directive (CRD) – Other Systemically Important Institutions (O-SIIs)

Template for notifying the European Central Bank (ECB) and the European Systemic Risk Board (ESRB) of the setting or resetting of an O-SII buffer under Article 131(7) CRD and of the identity of O-SIIs under Article 131(12) CRD

Please send/upload this template to:

- [macropru.notifications@ecb.europa.eu](mailto:macropru.notifications@ecb.europa.eu) when notifying the ECB (under Article 5 of the Single Supervisory Mechanism (SSM) Regulation<sup>1</sup>);
- [notifications@esrb.europa.eu](mailto:notifications@esrb.europa.eu) when notifying the ESRB.

The ESRB will forward this notification to the European Commission, to the European Banking Authority (EBA) and to the competent and designated authorities of the Member States concerned without delay and will publicly disclose the names of the O-SIIs on its website. This notification will be made public by the ESRB once the relevant authorities have adopted and published the notified macroprudential measure<sup>2</sup>.

E-mailing/uploading this template to the above addresses constitutes official notification; no further official letter is required. To facilitate the work of the notified authorities, please send the notification template in a format that allows the information to be read electronically.

1. Notifying national authority			
<b>1.1 Name of the notifying authority</b>	Central Bank of Malta (CBM) and Malta Financial Services Authority (MFSA)		
<b>1.2 Country of the notifying authority</b>	Malta		
2. Description of the measure			
<b>2.1a Institution or group of institutions concerned</b>	<b>Name of institution</b>	<b>LEI</b>	<b>Consolidation level</b>
	Bank of Valletta plc	529900RWC8ZYB066JF16	Highest Consolidation Level
	HSBC Bank Malta p.l.c.	549300X34UUBDEUL1Z91	Highest Consolidation Level
	MDB Group Limited	213800TC9PZRBHMJW403	Highest Consolidation Level
	APS Bank plc	213800A1O379I6DMCU10	Highest Consolidation Level
<b>2.1b Changes to the list of institutions concerned</b>	The same credit institutions identified as O-SIIs during the 2022 O-SII notification round are being re-confirmed as O-SIIs during this year's iteration.		

<sup>1</sup> Council Regulation (EU) No 1024/2013 of 15 October 2013 conferring specific tasks on the European Central Bank concerning policies relating to the prudential supervision of credit institutions (*OJ L 287, 29.10.2013, p. 63*).

<sup>2</sup> On request by the notifying authority, it may be agreed with the Head of the ESRB Secretariat that this notification, or a part thereof, should not be published for reasons of confidentiality or financial stability.

<b>3. Timing for the measure</b>																
<b>3.1 Timing for the decision</b>	11/12/2023															
<b>3.2 Timing for publication</b>	11/01/2024															
<b>3.3 Disclosure</b>	The same communication strategy followed in the 2022 identification process will be followed during 2023 i.e. informing the concerned banks of their O-SII status and applicable buffer rate through a dedicated private letter, and possible bilateral discussions, and informing the public via the respective Authorities' websites.															
<b>3.4 Timing for application</b>	01/01/2024															
<b>3.5 Phasing in</b>	<p>The O-SII buffer in MT has been implemented for the first time in 2016 through a four-year phase-in period, starting from 1 January 2016 and becoming fully phased-in on 1 January 2019. Therefore, BOV will continue maintaining its fully loaded O-SII capital buffer rate (i.e. 2.00%) during 2024.</p> <p>HSBC Bank Malta p.l.c.'s fully loaded O-SII buffer of 1.50% will remain capped at 1.25% to respect the provisions outlined under CRD Article 131(8).</p> <p>MDB Group Ltd will continue its phasing-in of the 0.50% increase to 1.00% as communicated in the 2023 O-SII statement of decision, reaching a fully loaded buffer rate of 1.00% by 2025.</p>															

	<p>APS Bank plc has been designated as an O-SII for the first time in 2019 and is currently subject to phasing-in provisions of the initial 0.25%. In 2023 the bank was also requested to phase-in an additional 0.25% O-SII buffer rate over a four-year phase-in period to reach a fully-loaded O-SII buffer rate of 0.50% on 1 January 2026.</p> <table border="1" data-bbox="598 472 1485 591"> <thead> <tr> <th>Name of institution</th> <th>2022</th> <th>2023</th> <th>2024</th> <th>2025</th> <th>2026</th> </tr> </thead> <tbody> <tr> <td>MDB Group Limited (MED)</td> <td>0.625%</td> <td>0.75%</td> <td>0.875%</td> <td>1.00%</td> <td>1.00%</td> </tr> <tr> <td>APS Bank plc (APS)</td> <td>0.125%</td> <td>0.25%</td> <td>0.375%</td> <td>0.438%</td> <td>0.50%</td> </tr> </tbody> </table>	Name of institution	2022	2023	2024	2025	2026	MDB Group Limited (MED)	0.625%	0.75%	0.875%	1.00%	1.00%	APS Bank plc (APS)	0.125%	0.25%	0.375%	0.438%	0.50%

<p><b>4.2 Methodology and indicators used for designation of the O-SII (Article 131.3)</b></p>	<p>During 2019, the Authorities decided to revise their methodology for the O-SII identification process with a view of reflecting the developments in the domestic financial sector and also to bring it more in line with the criteria established in the EBA Guidelines.</p> <p>Under the current O-SII methodology, domestic systemically important institutions are identified as such, based on their relative importance within the sector as per a set of specific criteria. The categories and indicators are based on those put forward in the EBA Guidelines. However, two additional indicators, i.e. 'private sector deposits from Maltese residents' and 'private sector loans to Maltese residents' were included in the 'importance' criterion in order to capture particular characteristics of the Maltese financial sector, especially the strong orientation of banks towards domestic deposits and loans.</p> <p>The Maltese banking sector is characterised by a small number of market participants, dominated by a few 'systemically relevant' institutions which are more integrated with, and interlinked to the domestic economy when compared to the rest of the banks within the sector. Most of these 'systemically relevant' banks operate under a 'traditional' retail banking business model. In view of this characteristic, the current methodology has been</p>																														

<sup>3</sup> [CBM-MFSA Policy Document](#) on the methodology for the identification of other systemically important institutions (O-SIIs) and the related capital buffer calibration.

	<p>designed in such a way as to identify as O-SIIs the aforementioned 'systemically relevant' institutions.</p> <p>The homogenous weight of 25% for all categories stipulated in EBA methodology does not reflect adequately the domestic financial system's characteristics. Consequently, as highlighted in the table below, a relatively higher weight is attributed to the 'importance' and the 'size' categories, with a total weight of 40% and 22% respectively. The Authorities deem these categories as being the most reflective of the specificities of the domestic banking sector's business model, thereby representing the potential channels of systemic risk for the institutions domiciled in MT. In line with this, given the rather traditional business models of domestic banks, the 'complexity' and 'interconnectedness' categories are assigned a lower weight of 18% and 20% respectively.</p> <table border="1" data-bbox="584 663 1501 1281"> <thead> <tr> <th>Category</th> <th>Indicators</th> <th>Indicator weight</th> <th>Category weights</th> </tr> </thead> <tbody> <tr> <td><b>Size</b></td> <td>Total Assets</td> <td>22.00%</td> <td>22.00%</td> </tr> <tr> <td rowspan="5"><b>Importance</b></td> <td>Value of domestic payment transactions</td> <td>8.00%</td> <td rowspan="5">40.00%</td> </tr> <tr> <td>Private sector deposits from depositors in the EU*</td> <td>5.50%</td> </tr> <tr> <td>Private sector loans to recipients in the EU**</td> <td>5.50%</td> </tr> <tr> <td>Private sector deposits from Maltese residents</td> <td>10.50%</td> </tr> <tr> <td>Private sector loans to Maltese residents</td> <td>10.50%</td> </tr> <tr> <td rowspan="3"><b>Complexity</b></td> <td>Value of OTC derivatives (notional)</td> <td>4.00%</td> <td rowspan="3">18.00%</td> </tr> <tr> <td>Cross-jurisdictional liabilities</td> <td>7.00%</td> </tr> <tr> <td>Cross-jurisdictional claims</td> <td>7.00%</td> </tr> <tr> <td rowspan="3"><b>Interconnectedness</b></td> <td>Intra-financial system liabilities</td> <td>9.00%</td> <td rowspan="3">20.00%</td> </tr> <tr> <td>Intra-financial system assets</td> <td>9.00%</td> </tr> <tr> <td>Debt securities outstanding</td> <td>2.00%</td> </tr> </tbody> </table> <p>* MT deposits are incorporated in 'private sector deposits from depositors in the EU' indicator. ** MT loans are incorporated in 'private sector loans to recipients in the EU' indicator.</p>	Category	Indicators	Indicator weight	Category weights	<b>Size</b>	Total Assets	22.00%	22.00%	<b>Importance</b>	Value of domestic payment transactions	8.00%	40.00%	Private sector deposits from depositors in the EU*	5.50%	Private sector loans to recipients in the EU**	5.50%	Private sector deposits from Maltese residents	10.50%	Private sector loans to Maltese residents	10.50%	<b>Complexity</b>	Value of OTC derivatives (notional)	4.00%	18.00%	Cross-jurisdictional liabilities	7.00%	Cross-jurisdictional claims	7.00%	<b>Interconnectedness</b>	Intra-financial system liabilities	9.00%	20.00%	Intra-financial system assets	9.00%	Debt securities outstanding	2.00%

<p><b>4.3 Supervisory judgement</b></p>	<p>No supervisory judgement has been used.</p>																																				
<p><b>4.4 Calibrating the O-SII buffer</b></p>	<p>A bucketing methodology is being followed as part of the calibration stage based on the scores achieved in the O-SII identification stage in section 4.2:</p> <ol style="list-style-type: none"> <li>1. An O-SII can be classified into one of any of the five buckets presented in the table below, depending on the O-SII score obtained with the identification methodology. Bucket 1 contains the lowest capital rate (0.25%) and bucket 5 entails the highest capital buffer rate (2.0%).</li> <li>2. Intermediate buffer rates of 0.5%, 1.0% and 1.5% are also applicable, thus reinforcing a proportionate and commensurate application of an O-SII surcharge; the higher the potential systemic risk posed by the respective O-SII, the higher the capital buffer rate applied.</li> <li>3. The overall score obtained in the identification methodology (refer to section 4.2) is used to guide on the resulting capital buffer rate as per table below:</li> </ol>																																				

Buckets	Capital Buffer Rate	Score range for each bucket (bps)
5	2.00%	1700 ≤ Score
4	1.50%	1200 ≤ Score < 1700
3	1.00%	830 ≤ Score < 1200
2	0.50%	580 ≤ Score < 830
1	0.25%	425 ≤ Score < 580

During the 2023 O-SII exercise, with a score of 1335bps, MDB Group Ltd. classified into bucket 4, corresponding to a 1.50% O-SII buffer rate, considered on a consolidated basis.

In their assessments, the Authorities also investigate the systemic relevance of credit institutions on a solo basis. Of note is that there is little difference in operations and business model between the individual and consolidated operations of MT banks, with the exception of MDB Group Ltd, where the divergent trends between the parent and its subsidiary are more evident.

When assessing the systemic importance for MDB Group Ltd on a solo basis, during 2023, the MT parent accounts for only 27.2% of the consolidated total assets. This anomaly, where the Belgian subsidiary's operations are larger than those of the parent, are the main driver of the high 'complexity' and 'interconnectedness' O-SII scores, which are resulting in MDB Group Ltd.'s methodologically indicated placement in bucket 4.

Upon further investigation, the Belgian subsidiary is not systemically important in Belgium, while on a solo basis, the MT parent's systemic relevance is significantly being overstated when looking at the consolidated level. Nevertheless, However, the degree of complexity posed by the Belgian subsidiary to the operations of the Group should not be overlooked.

Based on these considerations, the Authorities have decided to retain MDB Group Ltd. with a 1.00% O-SII buffer rate, to be fully phased-in by 2025.

**4.5 Effectiveness and proportionality of measure**

The O-SII buffer is an essential element of the ESRB Recommendation on the intermediate objectives and instruments of macro-prudential policy and is a macroprudential tool legally embedded in the CRD/CRR framework which, in turn, is domestically transposed in CBM Directive No. 11 and MFSA Banking Rule No. 15.

The O-SII buffer consists of a capital surcharge applied to institutions that may, in the event of failure, have considerable impact on the financial system and the real economy. This additional capital buffer is applied to domestic systemically important institutions to enhance their resilience by increasing their loss absorbing capacity and thereby ensuring that they pose minimal risk to the domestic economy in the form of externalities. Market failures targeted by the O-SII buffer mainly relate to excessive risk-taking due to expectations of a bailout (moral hazard) given the perceived systemic relevance by individual institutions ('too big to fail'). In this respect, the O-SII buffer is a macro-prudential instrument that contributes to financial stability by mitigating the structural element of systemic risk stemming from moral hazard, thereby promoting market discipline.

The domestic banking system is composed of a number of banks which are classified into three categories i.e. (a) core domestic banks; (b) non-core domestic banks and (c) international banks. The core domestic banks' category consists of a set of banks that exhibit relatively stronger links with the domestic economy and are therefore more likely to be classified as systemically important. These banks operate a widespread branch network, provide a full spectrum of banking services and are important providers of credit and deposit takers in MT. With total assets of €31.6 billion, the size of core domestic banks was equivalent to approximately 174.97% of GDP by June 2023. All four banking groups identified as O-SIIs fall in this category, three of which are identified as significant for SSM purposes.

The non-core domestic banks play a more restricted role in the economy, as the volume of operations and banking services they offer to residents are somewhat limited. As such, the linkages with the domestic economy are limited, restricted to deposit-taking and domestic credit intermediation to a much smaller extent. In turn, internationally oriented banks are mainly subsidiaries and branches of international institutions and therefore have virtually no links with the domestic economy. Together the non-core and international banks, by June 2023, make around 80.84% of domestic GDP.

Collectively, the four domestic banking groups classified as O-SIIs account for around 92.6% of the total assets of the core domestic banks and around 63.28% of the total banking system assets.

**5. Sufficiency, consistency and non-overlap of the policy response**

**5.1 Sufficiency of the policy response**

The MT O-SII identification framework puts greater weight on those indicators which are considered to reflect the main sources of systemic risk in Malta. Given that the four identified MT O-SIIs cover approx. 92.7% of the total assets of the core domestic banks, being the bank category that has the more direct link to the domestic economy, the policy is considered as sufficient in terms of coverage. In terms of the applied buffers, the 5-bucket calibration approach is also considered as sufficient as it allows for a commensurate application of the O-SII buffer while being more conservative than the ECB minimum OSII floors. An O-SII buffer starting from 0.25% increasing to 2%, proportionally reflects the degree of systemic risk in Malta.

As highlighted in the table below, when comparing the MT O-SII buffers floors with the ECB minimum O-SII floors, the applicable O-SII buffers under the MT O-SII methodology fully respect the ECB floor methodology by resulting in either similar or higher applicable O-SII buffer rates for all designated O-SIIs.

Identified O-SIIs	Applicable O-SII buffer	
	ECB minimum floors	MT methodology
APS	0.25%	0.50%
BOV	1.00%	2.00%
HSBC	0.50%	1.50%*
MED	1.00%	1.00%

\* Refer to section 2.2 for provisions applicable to HSBC's O-SII buffer

**5.2 Consistency of application of the policy response**

As outlined in the CBM-MFSA policy document, the O-SII buffer in MT is designed to contribute towards meeting the intermediate objective of limiting the systemic impact of misaligned incentives also with a view to reducing moral hazard, as specified under paragraph 2(d) of sub-recommendation A of ESRB Recommendation on intermediate objectives and instruments of macro-prudential policy (ESRB/2013/1).

The O-SII buffer is the main instrument used to meet the above specified intermediate objective, and has been consistently in place since 2016, following the transposition of Article 131 of Directive 2013/36/EU, as amended by Directive (EU) 2019/2034 in CBM Directive no. 11 and MFSA Banking Rule no. 15.

**5.3 Non-overlap of the policy response**

The O-SII buffer aims to mitigate the excessive risk-taking which domestic systemically important institutions might take owing to their belief that they will be bailed-out as a result of their systemic relevance (moral hazard and 'too big to fail'). In this respect, the O-SII buffer is the main policy in MT to address the 'too big to fail' risk. In view of the fact that 'systemically relevant' MT banks operate under a 'traditional' retail banking business model, a greater weight on the 'importance' (40%) and 'size' (22%) categories is being placed. In this manner, the MT O-SII methodology is calibrated so as to target the main transmission channels of systemic risk in MT

<b>6. Cross-border and cross-sector impact of the measure</b>	
<b>6.1 Assessment of cross-border effects and the likely impact on the Internal Market</b> <b>(Recommendation ESRB/2015/2<sup>4</sup>)</b>	From the internal market perspective, given the relatively small size of the domestic financial sector vis-à-vis its European counterparts, no impact is expected to materialise as a result of the domestic O-SII buffer.
<b>6.2 Assessment of leakages and regulatory arbitrage within the notifying Member State</b>	The buffers are set at the highest level of consolidation in MT. This avoids the possibility that institutions shift their business activities within the group, whether domestically or elsewhere.
<b>7. Combinations and interactions with other measures</b>	
<b>7.1 Combinations between G-SII and O-SII buffers</b> <b>(Article 131.14)</b>	Not applicable since there are no G-SIIs in MT.
<b>7.2 Combinations with systemic risk buffers (SyRBs)</b> <b>(Article 131.15 CRD)</b>	Not applicable since no MT institution is currently subject to a systemic risk buffer (SyRB) designed to address the risks covered by the O-SII buffer.
<b>7.3 O-SII requirement for a subsidiary (Article 131.8 CRD)</b>	In view of the completion of the corporate restructuring process for HSBC Group to comply with Article 21b CRD, HSBC Continental Europe is now the EU parent of HSBC Bank Malta p.l.c. HSBC Continental Europe is also subject to a 0.25% O-SII buffer in France and given the provisions outlined in Art 131 (8) of the CRD, the maximum O-SII buffer rate applicable to HSBC Bank Malta p.l.c. is capped at 1.25% (see section 2.2).

<sup>4</sup> Recommendation of the European Systemic Risk Board of 15 December 2015 on the assessment of cross-border effects of and voluntary reciprocity for macroprudential policy measures (ESRB/2015/3) (OJ C 97, 12.3.2016, p. 9).
